Visual Demonstration – Network Request Automation

1. Description

The Visual Demonstration showcases the practical implementation and real-time execution of the Network Request Automation solution in ServiceNow. It provides a structured walkthrough of how the system behaves from request submission to approval and completion.

This demonstration validates the working of dynamic UI behavior, approval workflow processing, automated email notifications, and Flow Designer execution logs. Annotated screenshots with highlights are included to clearly explain each stage of the automation lifecycle.

2. Demonstration Overview

2.1 Dynamic Form UI Behavior

The Service Catalog form demonstrates dynamic behavior using UI policies and client-side logic. Based on user selections:

- Relevant fields are displayed
- Irrelevant fields are hidden
- Mandatory validations are enforced
  This improves usability, reduces input errors, and ensures structured data collection.

2.2 Approval Records in Activity Timeline

The demonstration captures approval records within the request's activity timeline. It visually shows:

- Approval request generation
- Assigned approver details
- Approval status (Pending / Approved / Rejected)
- Timestamp tracking
  This ensures full traceability and transparency of the decision-making process.

2.3 Automated Email Notifications

Screenshots display the automated email notifications triggered at different workflow stages, including:

- Request submission confirmation

- Approval request notification
- Approval or rejection result
- Task assignment updates
  This demonstrates seamless system-driven communication without manual involvement.

2.4 Flow Execution Logs

Flow Designer execution logs are shown to verify:

- Trigger activation upon catalog submission
- Step-by-step action execution
- Approval routing logic
- Conditional branching
- Record updates
  These logs confirm that the automation executes accurately and follows the defined workflow path.

3. Overall Demonstration Flow

1. User submits the Network Request form.
2. Dynamic UI behavior validates inputs.
3. Record is created in the Network Database.
4. Approval request is generated.
5. Approval status is reflected in the timeline.
6. Email notifications are sent automatically.
7. Flow execution logs confirm successful processing.

4. Visual Evidence of System Execution

ACTIONS

1	Get Catalog Variables from Network Request	Core Action	Completed	2026-03-03 02:59:09	131ms
2	Create Record	Core Action	Completed	2026-03-03 02:59:09	24ms
3	Send Email		Completed	2026-03-03 02:59:09	37ms
4	Ask For Approval	Core Action	Completed	2026-03-03 02:59:09	147ms
5	If Request is Approved	Flow Logic	Evaluated - True	2026-03-03 02:59:48	283ms
6	Update Record	Core Action	Completed	2026-03-03 02:59:48	13ms
7	Create Record	Core Action	Completed	2026-03-03 02:59:48	24ms
8	Send Email		Completed	2026-03-03 02:59:48	41ms
9	Ask For Approval	Core Action	Completed	2026-03-03 02:59:48	73ms
10	If Status Changes	Flow Logic	Evaluated - True	2026-03-03 03:07:16	132ms
11	Update Record	Core Action	Completed	2026-03-03 03:07:16	6ms
12	Send Email		Completed	2026-03-03 03:07:16	126ms
13	End	Flow Logic	Completed	2026-03-03 03:07:17	0ms

Emails | Created | Search | Actions on selected rows... | New

All > Created on Today

Created	Recipients	Subject	Type	Notification type	User ID
2026-03-03 02:15:37	abel.tuter@example.com	First 1 mail, Request has been Created	send-ready	SMTP	(empty)
2026-03-03 02:16:14	abraham.lincoln@example.com	Second Mail, New Network Task: for Request:	send-ready	SMTP	(empty)
2026-03-03 02:16:18	abel.tuter@example.com	Third Mail, Order: has been	send-ready	SMTP	(empty)
2026-03-03 02:59:09	abel.tuter@example.com	First 1 mail, Request has been Created	send-ready	SMTP	(empty)
2026-03-03 02:59:48	abraham.lincoln@example.com	Second Mail, New Network Task: for Request:	send-ready	SMTP	(empty)
2026-03-03 03:07:16	abel.tuter@example.com	Third Mail, Order: has been	send-ready	SMTP	(empty)

5. Benefits of Visual Demonstration

- Validates end-to-end automation functionality
- Demonstrates real-time system behavior
- Enhances project credibility
- Provides practical proof of implementation
- Supports better understanding during presentations and viva

6. Conclusion

The Visual Demonstration effectively confirms the operational success of the Network Request Automation solution. By showcasing dynamic UI behavior, approval tracking, automated notifications, and execution logs, it provides clear evidence of a robust, reliable, and fully functional workflow implementation.
